

Unit II: Population Density

Name: _____

1. Using the formula for determining population density of an area calculate the population density of the Canadian provinces in the space provided below. Round your answer to the nearest 10th.

	Population 2000	Total area km ²	Population Density
Canada	30,750,100	9,984,670	
Newfoundland	538,800	371,690	
Prince Edward Island	138,900	5,660	
Nova Scotia	941,000	52,840	
New Brunswick	756,600	72,090	
Quebec	7,372,400	1,356,790	
Ontario	11,669,300	891,190	
Manitoba	1,147,900	548,360	
Saskatchewan	1,023,600	570,700	
Alberta	2,997,200	644,390	
British Columbia	4,063,800	929,730	
Yukon	30,700	482,443	
Northwest Territories	42,100	1,346,106	
Nunavut	27,700	2,093,190

2. Using the data from the question above, rank the provinces and territories by population density from highest to lowest.

Rank	Province/Territory
<p>Highest Population Density</p>  <p>Lowest Population Density</p>
